

# Aqua MedZyme Treatment Instructions

Turn off U.V. sterilizer during the first three treatments. Mix Aqua MedZyme with 2 to 3 gallons of pond water, stir vigorously, let stand for 10 minutes, then re-stir and distribute around your koi fish pond or water garden.

*Measuring scoop enclosed*

## 100 to 2,500 gallons

1 Tbsp. (scoop) every three days for three treatments, then 1 Tbsp. each week for two weeks

## Maintenance:

ONE HALF tablespoon every other week

## 2,501 to 5,000 gallons

1 Tbsp. (scoop) every three days for three treatments, then 1 Tbsp. each week for two weeks

## Maintenance:

ONE tablespoon every other week

For sick pond fish, double the maintenance dosage

## Dosage by Water Temperature:

**40-49 degrees:** Triple normal dosage

**50-62 degrees:** Double normal dosage

**63-68 degrees:** 1.5x normal dosage

**69 degrees and above:** Normal dosage

**NOTE: Never mix any Aqua Meds Products with TAP water. The chlorine in the tap water will damage the natural "microbes" and medications in the products. Use clean pond water.**

# Precautions

Please remember, Aqua MedZyme is 100% natural. Products like water conditioners, Aqua Prazi, Medi-Koi, Buff-it-Up, Arctic Blend or “probiotic” products will not harm Aqua MedZyme. Products that contain antibiotics or chemicals such as Formalin, potassium permanganate or others will set back the Aqua MedZyme in your pond. After using antibiotics or chemicals do a partial water change and add carbon to your pond filter for 24 hours if possible. Wait another 24 hours, remove the carbon, then, triple the “maintenance dosage” for the next two weeks.
