

Technical Reference Sheet for PondCare® Fish Feeder Block™

Purpose And Benefits:

Fish naturally forage for food in the garden pond. PondCare Fish Feeder Blocks provide a continuous supply of nutritious food pellets for the foraging habits of all pond fish when you're on vacation or just between regular feedings.

Fish Feeder Blocks consist of calcium blocks impregnated with specially formulated fish food pellets. This product is not intended to replace normal feeding practices, but rather to provide a food supplement when regular feeding is interrupted.

Perfect for vacation or long weekends, PondCare Fish Feeder Blocks ensure that fish receive adequate nutrition when pond keepers aren't home to provide regular feedings, or when new or young fish can't compete with established pond residents at feeding time.

Directions For Use:

Turn the tub over and lightly tap on a solid surface to remove the block. Drop the block anywhere in the pond.

Approximate Feeding: 1 block feeds 5 goldfish or koi (each 5"-10" in length). Lasts 5 to 7 days.

Compatibility:

N/A

Sizes Available:

#144B - 5oz (142g) feeding block
